Automotive systems are safety-critical and are required to be highly fault-tolerant in operation. Automotive systems consist of mechanical, hydraulic, software and hardware components. There is a staggering amount of embedded computing within automotive systems. For instance, current GM vehicles contain dozens of

Diagnosis in Automotive Systems: A Survey

COMPUTER CONTROL Modern automotive control systems consist of a network of electronic sensors, actuators, and computer modules designed to regulate the powertrain and vehicle support systems. The powertrain control module (PCM) is the heart of this system. It coordinates engine and transmission operation, processes

Computer Control Systems for Automotive Power Trains Davorin Hrovat and William F. Powers ABSTRACT: Electronic applications in automobiles have increased dramatically over the last decade in the United States. The most sophisticated applications have been functional in nature and involve the computer control of power trains.
