Solar Energy Generating Systems (SEGS) in California, with the combined capacity from three separate locations at 354 megawatts (MW, 474,700 hp), is now the world's second largest solar thermal energy generating facility, after the commissioning of the even larger Ivanpah facility in 2014. It consists of nine solar power plants in California's Mojave Desert, where insolation is among the best ...

Call For Papers. Special Issue on "Shaping future power systems with high penetration renewable generation" October 1, 2018: Deadline for full paper submission Find out more here

### **International Transactions on Electrical Energy Systems**

The Sun is the source of energy for most of life on Earth. As a star, the Sun is heated to high temperatures by the conversion of nuclear binding energy due to the fusion of hydrogen in its core. This energy is ultimately transferred (released) into space mainly in the form of radiant (light) energy.

Powerful X-ray Beams Unlock Secrets of Nanoscale Crystal Formation. High-energy X-ray beams and a clever experimental setup allowed researchers at Georgia Tech to watch a high-pressure, high-temperature chemical reaction to determine for the first time what controls formation of two different nanoscale crystalline structures in the metal cobalt.
