INTRODUCTION TO FUNCTIONAL ANALYSIS 5. 1.1.1. 2π -periodic functions. In this part of the course we deal with functions (as above) that are periodic. We say a function $f: \mathbb{R} \rightarrow \mathbb{C}$ is periodic with period $T > 0$ if $f(x + T) = f(x)$ for all $x \in \mathbb{R}$. For example, $\sin x$, $\cos x$, $e^{ix} (= \cos x + i \sin x)$ are periodic with period 2π .

Functional text analysis - Michal Boleslav Machura

From the preface by the author. Textbooks in functional analysis (or more generally, in mathematics) are often unnecessarily demanding -- written in a concise manner with few examples and motivations. Proofs in such textbooks are sometimes so terse that much time and energy are required of students just to verify their logical correctness,...

Recall that the canonical norm on H induced by the inner product is given by $\|x\| = \sqrt{(x, x)}$. If H is complete with respect to the corresponding metric, then we say that H is a Hilbert space.
