The Journal of Physical Chemistry C (ACS Publications)

In chemistry, a colloid is a mixture in which one substance of microscopically dispersed insoluble particles is suspended throughout another substance. Sometimes the dispersed substance alone is called the colloid; the term colloidal suspension refers unambiguously to the overall mixture (although a narrower sense of the word suspension is distinguished from colloids by larger particle size).

Flocculation, in the field of chemistry, is a process wherein colloids come out of suspension in the form of floc or flake, either spontaneously or due to the addition of a clarifying agent. The action differs from precipitation in that, prior to flocculation, colloids are merely suspended in a liquid and not actually dissolved in a solution. In the flocculated system, there is no formation of a ...

This table is presented in ascending order of particle surface area (column 2) to provide an easy means for direct comparison among the various properties associated with particle surface area. Data from the product reports is compiled into a table so the reader can compare products based on costs and particle surface area.
